

1. Project Overview

Project Title: FitBuddy - AI Fitness & Diet Plan Generator

Domain: Python Web Application / Healthcare & Wellness

Framework: Streamlit

Programming Language: Python 3.x

2. Abstract

FitBuddy is a responsive, web-based personal fitness planner developed using Python and the Streamlit framework. The primary goal of this application is to deliver customized exercise schedules and nutrition plans based on individual physical metrics and wellness goals.

Modern lifestyle challenges often prevent individuals from consulting professional fitness trainers or dietitians regularly. FitBuddy addresses this challenge by providing an accessible, automated, and interactive digital solution. By capturing parameters such as age, height, current weight, dietary preferences (Vegetarian, Non-Vegetarian, Vegan), and target fitness objectives (Weight Loss, Muscle Gain, General Fitness), the system dynamically computes and renders a personalized 7-day routine alongside dietary recommendations.

3. Key Features

- Immediate interactive fitness plan generation with minimal latency.
- Multi-category nutrition schedules accommodating varied dietary practices.
- Structured workout routines dividing cardio, strength, and active recovery days.
- Clean, user-centric web interface with intuitive numeric and select controls.
