

1. System Installation Guide

Follow these steps to set up and run the FitBuddy project locally:

Step 1: Install Python

Ensure Python (version 3.8 or newer) is installed and added to your system PATH.

Step 2: Install Project Dependencies

Open Terminal or Command Prompt and install Streamlit:

```
pip install streamlit
```

Step 3: Navigate to Project Directory

Change directory to the project folder:

```
cd "OneDrive\Desktop\fitbuddy"
```

Step 4: Launch Application

Execute the Streamlit application runner:

```
streamlit run app.py
```

2. User Instructions

1. Upon launch, the application will automatically open in your default browser at `http://localhost:8501`.
2. Enter your **Age**, **Weight (kg)**, and **Height (cm)**.
3. Select your **Diet Preference** and your primary **Fitness Goal**.
4. Click **Generate Fitness Plan** to view your custom weekly workout routine and diet plan.
